

Scientific Advisory Board (SAB) at Active Inference Institute ~ Application

Application open for 2024 | 1:49

Applications are open to be on the Scientific Advisory Board, the SAB, for the Active Inference Institute in 2024. This is a volunteer position that is designed to be valuable, meaningful, and time efficient for SAB members as well as the Institute. SAB members with different skills and perspectives, including a wide range of familiarity with Active Inference, engage with the Active Inference ecosystem in multiple ways, including joining optional monthly SAB discussion sessions to give insights and connect with other SAB members. SAB members support the Institute by making connections and collaborating on philanthropic and grant programs. SAB members participate directly in ongoing Institute activities and also propose or lead education or research projects of their own, like Chris Fields and the Physics as Information Processing course in 2023. And also, we're always looking to SAB members to lead alternative forms of engagement. So, if there's something that's interesting to you, then we're excited to maybe hear about it. See our website, [activeinference.org slash about slash scientific advisory board](https://activeinference.org/about/scientific-advisory-board). And on this page, you'll see a little bit more information about the SAB. You'll see our 2023 and 2022 cohorts. And this 2024 will be the third cohort of the SAB and you can click on this link on the site to apply directly. Please submit your application for the 2024 SAB before December 15th, 2023. And let us know wherever you're seeing this video or by email at blanket.activeinference.institute if you have any questions. Thank you. Bye.
